## 1 Intended Audience

This document is intended to be read and used by a SharePoint Farm Administrator who wishes to:

- Install/Uninstall DocRead to a SharePoint Server Farm.
- Upgrade DocRead.
- Manage DocRead licence keys.
- Activate and Configure DocRead on a SharePoint site.
- View and manage event logs.
- View and manage users and user licences.

## 2 Install DocRead on a SharePoint Server Farm

#### 2.1 Prerequisites

Before using this guide, please ensure your SharePoint Farm meets the minimum requirements as stated below:

#### 2.1.1 Requirements for DocRead

- **Operating system** DocRead can be installed on all operating systems supported by SharePoint 2013 Foundation Edition (and above) and also all SharePoint 2016 editions.
- **Browser Client** The Browser Client requirements are exactly the same as for Microsoft SharePoint 2013 & 2016, i.e. Microsoft Internet Explorer 8 or above. Please see this document for more information on browser support: http://technet.microsoft.com/en-us/library/cc263526.aspx
- **Software** DocRead requires the following software to be installed and correctly configured:
  - Microsoft SharePoint Server 2013 Standard, Enterprise or Foundation or Microsoft SharePoint 2016 (all editions).
  - SQL Server 2008 R2 or above (for the DocRead database).
  - o .Net 4.0 is required on all Web Front Ends and Application servers.

#### 2.1.2 Requirements for the Notifications Scheduler

- **Operating System** The Notification Scheduler requires a 64 bit operating system that can connect to the SQL server containing the DocRead Database. These operating systems are all supported: Windows server 2008 64bit, Windows 2008 64bit R2 or Windows Server 2012, Windows Server 2012 R2.
- Software
  - o .Net 3.5 SP1.
  - SQL Server 2008 or above (for the Scheduler database)

#### 2.2 Introduction

DocRead is a document acknowledgement system for SharePoint 2013 & 2016 that actively targets content to groups of users and allows them to explicitly acknowledge that they have read and understood it.

This guide is intended to walk you through the process of installing DocRead on your SharePoint server farm.

#### 2.3 Download DocRead from the Collaboris Site

You can skip this step if you have already been provided with a copy of DocRead or been given an alternative URL by Collaboris.

1. Navigate to the DocRead download page at: <u>https://www.collaboris.com/products/docread/</u> and click the 'download trial' button.

- 2. Enter your details into the form displayed.
- 3. Versions to support SharePoint 2010 (Server and Foundation) and SharePoint 2013 (Server and Foundation) and SharePoint 2016 are available.
- 4. Download and save the installation files to a server in your target SharePoint Farm. (An application server is recommended).

#### 2.4 Run the Installer

**Important Note!** During the installation and configuration of DocRead your SharePoint Farm may become temporarily unavailable for a short period. We **strongly recommend** that you perform these steps outside of normal business hours.

- 1. Log on to the SharePoint server where the Central Administration site is installed (this is normally your SharePoint application server). The logged on user needs to be a **local** server administrator and a SharePoint Farm Administrator as well.
- 2. Copy the downloaded ZIP file to a local folder and unzip its contents.
- 3. The contents of the ZIP file are:
  - a. DocRead 2013 & 2016 Folder
    - i. **DocReadSetup64.msi** The installer that deploys DocRead to the SharePoint Farm.
    - ii. **Setup.exe** The bootstrapper required to start the installer. This will be the file that you need to run to install DocRead.
  - b. DocRead Scheduler Folder
    - i. **Collaboris.Scheduler.Installer64.msi** The installer for the email notification engine.
    - ii. **Setup.exe** The bootstrapper required to start the installer. This will be the file that you need to run to install the Scheduler.
- 4. Under the DocRead 2013 & 2016 folder right click Setup.exe and select 'Run as administrator' to start the installation wizard.

The DocRead installer set up wizard will now run.

5. You must read and accept the Licence Agreement terms and conditions by choosing 'I Agree', then click 'Next'.

icense Agreemer	nt		0
lease take a moment to read gree", then "Next". Otherwise	the license agreement now. If e click "Cancel".	you accept the term	s below, click ''l

AGREEMENT ("LICEN	ONDITIONS SET OUT I CE") FORMS A LEGAL ED BELOW) AND COLLA	AGREEMENT BE	TWEEN THE
O I Do Not Agree	● I Agree		

6. Select the correct location to install DocRead. The default location is C:\Program Files\Collaboris\DocRead\

Select Installation Folder	0
The installer will install DocRead to the following folder. To install in this folder, click "Next". To install to a different folder, enter it be	low or click "Browse".
Eolder: C:\Program Files\Collaboris\DocRead\	Browse Disk Cost
Cancel < Back	Next >

7. Choose whether you want the installer to deploy the solution to SharePoint (recommended) or you want to manually deploy it from central administration later (see section 5).

**Note:** Selecting 'Deploy Solution to SharePoint' will cause IIS to restart on all web front ends which means that all your sites will be temporarily unavailable. We recommend that this is completed outside business hours to minimise disruption.

Installation Options			0
The installer can automatically deploy server with a corresponding temporar required to manually deploy the soluti DocRead a temporary loss in service	y loss of service. If y on from central admi	ou leave this option unc nistration. IMPORTANT	hecked you will be
Deploy solution to SharePoint ?			
	Cancel	< Back	Next >

**Note:** If you are upgrading DocRead from a previous version then 'Deploy solution to SharePoint' is ignored as the solution already exists. This will cause all of your sites to be temporarily unavailable.

8. Confirm that you wish to proceed by selecting 'Next'.

Confirm Installation
Depending on the size of your SharePoint farm this install operation can take several minutes to complete. Do you want to proceed?
Cancel < Back Next >

9. The programs will now install. Depending on the size of your Farm, this may take several minutes.

Installing DocRead	0
DocRead is being installed.	
Please wait	
Cancel < Bac	< <u>N</u> ext >

10. When completed you will receive an 'Installation Complete' screen. Click 'Close' to exit.

Installation Complete
DocRead has been successfully installed.
Click "Close" to exit.
Please use Windows Update to check for any critical updates to the .NET Framework.
Cancel < Back Close

**TIP:** During installation, a log file is generated which can be found in the installation folder. The log file is named 'InstallLog{6-digit code}.log' and can be useful when troubleshooting.

#### 2.5 Deploying from Central Administration

You can skip this section if you have already deployed the software during the installation process as shown in section 2.4.

**Note:** Selecting 'Deploy Solution to SharePoint' will cause IIS to restart on all web front ends which means that all your sites will be temporarily unavailable. We recommend that this is completed outside business hours to minimise disruption.

1. In Central Administration go to 'System Settings' and select 'Manage Farm Solutions'.

S	System Settings
Central Administration Application Management	Servers Manage servers in this farm   Manage services on server
System Settings Monitoring	E-Mail and Text Messages (SMS) Configure outgoing e-mail settings Configure incoming e-mail settings   Configure mobile account

8. Before proceeding, please ensure that both solutions are deployed with no errors.

## 2.6 Administration and Initial Database Set Up

Once you have successfully downloaded and installed DocRead on your SharePoint Farm you need to configure DocRead using new menu options in Central Administration.

**Note:** You need to ensure that you are logged into Central Administration as a Farm Administrator to be able to complete all aspects of the following set up procedure. You will also need to create a service account in AD to be used by the scheduler service.

Go to SharePoint Central Administration and locate the new Collaboris Settings section in the default landing page.

## 2.6.1 Database Settings

DocRead requires the creation of two SQL Server databases:

- a. **Main DocRead database** stores all the information required to assign and process tasks.
- b. **Scheduler database** stores scheduling information used by the scheduler service to send notification emails.

Completing the steps in this section will result in the creation of both databases automatically.

- 1. Within the Collaboris menu, select 'Database settings'.
- 2. Enter database (SQL) server (the default server used by your Farm will be pre-populated).
- 3. Enter your DocRead database name, please note this should be a unique database name, not contain any special characters and be less than 255 characters long.

- 4. Enter your Scheduler database name, again please note this should be a unique database name, not contain any special characters and be less than 255 characters long.
- 5. Enter the name of your scheduler service account (see note below). This needs to be in the format domain\username.

**Note:** The scheduler service account will be granted the correct privileges over the DocRead and Scheduler databases. When you configure and install the DocRead Notification Scheduler service, please ensure you use this account as the identity that the windows service runs as. This will ensure the correct permissions are granted.

S >	Collaboris Database	Configuration Settings .
Central Administration Application Management System Settings Monitoring Backup and Restore	Collaboris Database Server Settings Select the name of the database server used to store the Collaboris databases. Collaboris Database Settings Specify the name of the Collaboris database.	Database Server: CLBSP2013 Database Schema Version: Supported Database Schema Version: 3.0
Security Upgrade and Migration General Application Settings Apps Collaboris Settings Configuration Wizards	Scheduler Database Settings Specify the name of the scheduler account and database.	Collaboris Database Name: CollaborisDatabase Scheduler Database Name: SchedulerDatabase Scheduler Service Account: yourdomain\useraccountname ×
Site Contents	Powershell User Account Settings Specify the name of the user accounts to execute the Collaboris Powershell scripts.	Powershell User Accounts:

- 6. DocRead also includes some Powershell Cmdlets to help automate the creation of Line Managers. If you wish to use these cmdlets, please specify the account(s) that you will be doing this with to ensure the relevant permissions are granted over the database. It also necessary to ensure that this user is also given access to run SharePoint Powershell commands.
- 7. Click 'OK' both databases will be created.
- 8. Keep a note of these values as they will be needed again when installing the Collaboris Notification Scheduler.

## 2.6.2 DocRead Global Settings

You need to specify which SharePoint web applications DocRead will be attached to. It is highly recommended that you only select web applications that contain sites where you will want to enable DocRead. This will ensure that you tightly govern who has the privilege to send out tasks to users.

DocRead will also create three SharePoint timer jobs that will be used to process the reading tasks. This allows it to scale to tens of thousands of users without seriously impacting the performance of your Farm. The timer jobs not only look for new documents that need acknowledging, but also monitor for new users entering or leaving your SharePoint Groups and Audiences. This is hugely powerful as it means that once a document has been targeted to an audience, DocRead will send tasks to new users within the group without you having to do a thing.

The three timer jobs used by DocRead are:

- **Readership processing**: responsible for the creation and deletion of reading tasks.
- Audience synchronisation: monitors changes within the user group structures. This ensures that should a user move between groups their completed reading task history remains intact and new reading tasks are assigned in line with the reading requirements of their new user group.
- SharePoint objects synchronisation: detects when a site collection, site or document library has been deleted and removes reading tasks appropriately.

This section will show you how to attach DocRead to individual web applications and how to configure the schedules for each timer job.

- 1. Select DocRead 'Collaboris Settings > Global Settings' page in Central Administration.
- 2. Click within the 'Web Application' box to view the available options and select the relevant web application(s) for your Farm. You can add multiple web applications by selecting them from the list provided.

3. For the next three Scheduling options select your preferred frequency for the timer jobs used by DocRead.

Reading Tasks Job Schedule	
Specify the frequency of the process readings timer job.	○ Daily
	Run every 2 hours
Audiences Synchronisation Job Schedule	
Specify the frequency of the audiences synchronisation timer job.	◯ Daily ◉ Hourly ◯ Run Now Only
	Run every 4 hours
SharePoint Objects Syncronisation Schedule	
Specify the frequency of the SharePoint objects synchronisation schedule	● Daily ○ Hourly ○ Run Now Only
	Run between 2 hours and 4 hours

**Note:** Selecting 'Run Now Only' will only process tasks once (immediately after the 'OK' button is pressed) which is useful if you want to override the usual schedule, however you must remember to reselect your usual timer settings after the tasks are processed otherwise the timer job will not run again.

4. Enter your chosen default values for 'Required Reading (days)' and 'Recommended Reading (days)'.

Default Values Specify the default number of days for the recommended and required reading periods.	Required Reading (days):
	Recommended Reading (days):

These specify the number of days that each type of 'reader' may take to complete the document task. Once this time has elapsed, required reading tasks become overdue. Please note that these are calendar days, not working days and do not take account of bank or public holidays. Therefore if you wish to allow readers 2 weeks to read a standard document you need to enter '14' in this field. These can be overridden at a later stage, on a per document basis, by a DocRead Publisher when assigning the task to the target group or audience.

5. Number of processing threads. This value allows you to scale up or down the number of threads used by DocRead based on the number of CPU's your server has.

Number of Processing Threads	
Please select the maximum number of processing threads used by DocRead.	Maximum Number of Processing Threads

6. Use the drop down arrows to select your preferred user interface skin. Given that the DocRead web parts cache this value, any changes made here will take 15 minutes to take effect.

## 7. If you are using a SharePoint Server edition that supports Audiences and require the option to assign tasks using DocRead to audiences at site level then check 'Enable Audiences'.

Audiences Specify if audiences can be used by DocRead. If you are using SharePoint Foundation the value of this field should be left unchecked.	☑ Enable Audiences
<b>Note:</b> Enabling this audience feature on a site means that DocRead ta to be assigned to Active Directory groups or individuals on the site unaffected).	
<b>Note:</b> If you are using SharePoint Foundation then checking this box w work incorrectly.	vill cause DocRead to

8. Force View Document configures a default (global) setting specifying whether to force the user to download a document before they read and confirm. We recommend leaving this checked so that you can ensure users have at least opened the document before confirming they have completed their task.

Force View Document	
Specify whether the user is forced to view the document before confirming. This can be overridden at the web level.	✓ Force View Document

9. Click 'OK' to save your changes.

#### 2.6.3 Default DocRead Messages

On this page you can define and write the basic messages that will be displayed to users for each step of the document approval process. Each of these 'standard' messages can be overwritten on a per document basis using the Message Template options that will be described later, the idea here is to set the default messages that will be received, should no other action be taken.

1. Click on the 'Collaboris Settings' menu heading to go to the detailed Collaboris Settings Menu.

2. Select 'Configure Messages' and click 'OK' to save any changes you make, or click 'Cancel' to accept the default text.

DocRead Messages 🛛	
Completed Readership Message displayed to a user to indicate that the reading task for a specific document has already been completed.	Title Reading Completed
	Message You indicated that you have already read this document.
Deleted Reading	
Message displayed to a user when a document associated with a reading task has	Title
been deleted.	Reading Task Deleted
	Message This document has been deleted. You are no longer required to read this document.

#### 3. Receipt messages.

These messages are displayed when a readership confirmation receipt is issued. A positive receipt message is issued when a reader confirms that they have completed a readership task. A negative receipt message is issued when a reader does not complete a readership task and that task is then deleted.

Receipt Messages Information message displayed in the reading receipts.	Positive receipt message This document certifies that the user "{Fields.UserName}" has confirmed reading the document "{Fields.DocumentTitle}" on the date: {Fields.TaskCompletionDate}.
	Negative receipt message This document confirms that the user "{Fields.UserName}" has failed to complete the task to read the document "{Fields.DocumentTitle}".

Simple messages are provided as an initial default position, however you may wish to amend or change these to suit your business or circumstances.

The 'tokens' (shown as in the table below) are replaced by actual values when generated.

Token	Description	Example of value
{Fields.DocumentTitle}	Title of document	Computer Use Policy
{Fields.DocumentName}	Name of document	Computer Use Policy
{Fields.DocumentUrl}	Address of document	http://company/DocRead/ComputerUsePolicy.doc
{Fields.DocumentVersion}	Document version	2.1
{Fields.DocumentBusinessId}	Document ID	102536
{Fields.TaskCompletionDate}	Task completion date	12/02/2012
{Fields.UserName}	User name	Alice Brown
{Fields.UserPreferredName}	Users preferred name	Alice

### 2.6.4 Readership Terms and Conditions

On this page you can write a message to the user which they must read and accept before acknowledging they have read the attached document. A default text is provided for guidance and as with the other messages, this statement can be amended on a per document basis at a later stage.

- 1. From the Collaboris Settings main menu, select 'Configure terms and conditions'.
- 2. Click 'OK' to save any changes you make, or click 'Cancel' to accept the default text.

Reading Terms And Conditions 🛛		
Terms and Conditions Message		
Specify the terms and conditions message to be agreed by the user when completing	Terms And Conditions	
a reading task.	You are required to read this document. After reading the document tick the box below and click Confirm. I hereby confirm that I have read the document that is linked from this page.	
	OK Cancel	

## 2.7 Licensing

You need to purchase a licence to use DocRead. Input your licence key in the box provided and click 'Add Key'. Details of the licence will appear in the 'Product License Details' section.

If you are using the evaluation version of our software then this will already be populated with a licence key that will last for 30 days from installation.

If you are upgrading to version 3.x from an earlier release, and have not already been provided with a new licence key, please contact <u>sales@collaboris.com</u> for your new key.

Please check all details are correct before proceeding.

S	DocRead Lice	ensing

#### 2.8 DocRead Reporting Tool

The DocRead Reporting Tool gives enhanced reporting functions and also allows you to download reports to Excel, PDF files etc.

1. To ensure that the Reporting infrastructure is activated go to Central Admin, Application Management, Manage Web Applications.

2. Select the relevant Web Application (this should be the same application that was chosen for 'Readership Global Settings').

SharePoint					Newsfeed	SkyDrive	Sites	SP2013\administrator 🗸 🔅	?
BROWSE WEB APPLIC	ATIONS							🗘 SHARE	[□]

Security									

3. Under 'Web Applications' in the top menu bar, select 'Manage Features'.

BROWSE	WEB APPLIC	CATIONS		
New Exter	nd Delete	General Settings -	Manage Features Managed Paths Service Connections	
Contrit	oute		Manage	

- 4. The 'Manage Web Application Features' page will be displayed.
- 5. Ensure that the 'Collaboris Reporting Infrastructure' is active and click 'Activate' if not.

Collaboris Reporting Infrastructure		
Enables session state and changes the web.config to enable the Collaboris reporting functionality on this web application. IMPORTANT: Activating this feature will enable session state on all sites hosted by the web application.	Deactivate	Active

**Note:** DocRead Reporting requires session state to be enabled on your target Web Applications. Hence, when you click 'Activate' this will amend the "web.config" to set session state (if it isn't already), but will also cause your Application Pool to recycle on all web front end servers and application servers. This will cause temporary disruption to your service, so it's highly recommended you do this out of hours, or during a scheduled maintenance window.

## 2.9 Collaboris Notification Scheduler

#### 2.9.1 Decide where to install the Notification Scheduler

The scheduler is responsible for sending email notifications for assigned, completed or overdue reading tasks to users. It needs to be separately installed and configured from the main DocRead system. There are two possible locations to install the Notification Scheduler:

- On one of the SharePoint Application Servers Use this option if you foresee that you will not be sending more than a few hundred emails per day.
- On a dedicated server outside of your SharePoint Farm Use this option if you foresee that you will be sending several thousand emails or more per day. This server will need to be able to connect to the SQL server that is part of your SharePoint Farm.

**Note:** To have an idea of the volume of emails that DocRead will need to send just multiply the number of documents that will be controlled by DocRead by the maximum number of users targeted by DocRead.

#### 2.9.2 Install the Collaboris Notification Scheduler

#### 1. Log on as local administrator and navigate to the SharePoint directory.

**Note:** It is important to launch the scheduler with a domain account who is a member of the 'administrators' group on the machine. This is because the user name and password need to be verified and also because rights to install a windows service are required.

- 2. Copy the contents of the DocRead Scheduler folder, extracted from the downloaded DocRead ZIP file, to the server identified in section 2.9.1.
- 3. Right click Setup.exe, on the new location, and select 'Run as administrator'.
- 4. The DocRead installer set up wizard will now run.

5. You must read and accept the Licence Agreement terms and conditions by choosing 'I Agree', then click 'Next'.

- 6. Select the correct location to install the Scheduler. The default location is 'C:\Program Files\Collaboris\DocRead\Scheduler\' and click 'Next'.
- 7. Confirm that you wish to proceed by selecting 'Next'.

Select Installation Folder	Confirm Installation
The installer will install Collaboris Notification Scheduler to the following folder. To install in this folder, click "Next". To install to a different folder, enter it below or click "Browse".	The installer is ready to install Collaboris Notification Scheduler on your computer. Click "Next" to start the installation.
Eolder: C:\Program Files\Collaboris\DocRead\Scheduler\ Disk Cost Install Collaboris Notification Scheduler for yourself, or for anyone who uses this computer:	
Everyone     O Just me     Cancel	Cancel < Back Next >

- 8. The programs will now install.
- 9. When completed you will receive an 'Installation Complete' screen. Click 'Close' to exit.

Installation Complete	
Collaboris Notification Scheduler has been successfully installed. Click "Close" to exit.	
Please use Windows Update to check for any critical updates to the .NET Framework.	
Cancel Close	

## 2.9.3 Configure the Collaboris Notification Scheduler

Once the scheduler is installed on your server you need to configure it for your farm.

- 1. Browse to the directory where you installed the scheduler.
- 2. Then right click '**Collaboris.Readership.Administration.exe**' and select 'Run as Administrator'.

## 3. Enter the service account username (this should be the same value as the scheduler service account setting used in section 2.6.1).

**Note:** This user account will need Database Owner permissions over both the 'Scheduler' database and the 'DocRead' database. This should be the same account as entered on the Database Settings screen in Central Admin.

4. Enter the relevant password for the service account and click 'Install Service'.

	Log on to the server     Use Windows Authentication
	C Use SQL Authentication User Name :
	Password : Confirm Password :
	Database Name: DocReadDatabase Refresh

17. Click 'OK' to finish. Your DocRead Email notification system is now fully configured and ready to send emails.

## 2.10 Installing the Charting Web Parts

DocRead ships with four chart web parts that provide different graphical representations of Reading Tasks. The web parts are contained and deployed in a separate WSP called **'Collaboris.Readership.Charting.Solution2013.WSP'** (this will have the same name even if you are using SharePoint 2016). To use these web parts on a particular web application, you need to deploy the WSP to that web application. The following instructions explain how to do this.

**Note:** Deploying the WSP to a web application will cause new entries to be placed into the web.config of that application, resulting in the Application Pool recycling.

- 1. From Central Administration select 'System Settings' then 'Manage Farm Solutions' to arrive at the 'Solution Management' page.
- 2. Click on the 'collaboris.readership.charting.solution2013.wsp' (this will state 2013 even if you are using SharePoint 2016).

Solution Management 🛛				
Name	Status	Deployed To		
collaboris.readership.charting.solution2013.wsp	Not Deployed	None

This will grant the solution assemblies full roceed unless you trust the solution provider.		

## 3 Activate and configure DocRead on a SharePoint site

#### 3.1 Activate DocRead Site Collection Features

Now that an Administrator has configured DocRead within SharePoint Central Administration, you need to enable the DocRead functionality on your site collection home page.

- 1. Log on to SharePoint as a Site Collection Administrator.
- 2. On the main Site Collection home page, select 'Settings' then 'Site Settings'.
- 3. Under 'Site Collection Administration', select 'Site collection features'.

Site Collection Administration Recycle bin
Search Result Sources
Search Result Types
Search Query Rules
Search Schema
Search Settings
Search Configuration Import
Search Configuration Export
Site collection features
Site hierarchy
Site collection audit settings
Audit log reports

4. Click the 'Activate' button for 'DocRead Charting Webparts' and 'DocRead Site Collection Features'.

	DocRead Charting Webparts Deploys the DocRead Charting Webparts.	Activate
<u>8</u>	DocRead Site Collection Features Deploys the DocRead functionality to the current site collection. IMPORTANT: If an exception occurs (such as a licensing error) please examine the DocRead logs in Central Admin.	Activate

### 3.2 Activate DocRead Functionality

Now you need to enable the DocRead functionality within your chosen SharePoint Sites.

Normally, DocRead should be enabled on sites that contain libraries with policies and procedures within them. However, DocRead can be used to send any item / document contained in a SharePoint document library or list to any group of users, so it's up to you where to use DocRead.

You need to repeat these steps for every Site where you wish to use DocRead.

- 1. Log on to SharePoint as a Site Collection Administrator.
- 2. Within the main Site Collection home page, select 'Settings' then 'Site Settings'.
- 3. Under 'Site Actions', select 'Manage site features'.

4. Click the 'Activate' button for DocRead Site Features, DocRead Reporting and DocRead Default Reports. If DocRead reporting hasn't been configured within Central Administration it will raise an error when clicking 'Activate'.

**Note:** You will not be able to activate the 'DocRead Site Features' if the relevant DocRead site collection hasn't been activated.

DocRead Default Reports Deploys the default DocRead reports to the current site	Activate
DocRead Reporting Deploys the DocRead reporting functionality to the current site	Activate
DocRead Site Features Deploys the DocRead functionality to the current site. IMPORTANT: Uninstalling this feature will remove all DocRead functionality from this site and it will delete all reading tasks assigned to documents on this site.	Activate

## 3.3 DocRead Site Settings

- 1. Go back to the Site Settings page and scroll down to find the DocRead section.
- 2. Select 'Site Settings'.

DocRead
Site settings < 🗕 🚽 🛶 🛶 🛶 🛶 🛶
Process site reading tasks
Site tasks
Synchronise site documents

3. The 'Lock Audiences' box should only be selected if you want to ensure that new audiences cannot be assigned to documents on this site. If this option is enabled reading tasks will still be processed and assigned to users as normal but new audiences cannot be assigned to documents.

Lock Audiences	
Lock audiences so that new audiences cannot be assigned to documents on this site. If this option is enabled reading tasks will still be processed and assigned to users as normal but new audiences cannot be assigned to documents.	Lock Audiences 🗌

4. Select 'Add List' to select the document libraries or lists you wish to be enabled with DocRead functionality. You may choose as many as you wish, or you may prefer to dedicate some specific libraries solely for DocRead use. It is recommended that you keep these to a minimum to ensure that DocRead is not used for unimportant or confidential items.

Lists	
Please select the lists that you want to attach to DocRead. You can also choose the "Comments" and the "Document ID" fields if you want DocRead to use those fields when assigning reading tasks to users.	Add List

**Note:** Although SharePoint may have many Document Libraries and lists, it is not necessary to enable DocRead on them all. DocRead should only be enabled on those Document Libraries or lists where items in those libraries are intended to be distributed throughout the organisation via DocRead. DocRead does not need to be enabled on Document Libraries or lists that are used to contain static information which will not be distributed.

Please select the lists that you want to attach to DocRead. You can also choose the "Comments" and the "Document ID" fields if you want DocRead to use those fields when assigning reading tasks to users. Select column Select column Select column Document ID Column Select column Delete	Lists	
	to DocRead. You can also choose the "Comments" and the "Document ID" fields if you want DocRead to use those fields when	Please select  Comments Column Select column Document ID Column Select column

5. If required you can select a Comments Column and Document ID Column from the drop down list. These columns will be used when assigning documents to users. For example, if you select a comments column that specifies what has changed in the latest version, this will be displayed to the user (in both the task information panel and the email notifications) so their attention may be focused on the relevant parts of the document.

**Note:** If your organisation uses a Document ID service to ensure your documents are uniquely identifiable, select it here and DocRead will track and record it for you. This can be useful for auditing purposes.

6. Select the correct groups of users (you can select more than one group if wished) to become the DocRead Site Collection / Site Administrators and DocRead Publishers from the list of available groups in your environment (users may belong to both groups if wished).

**DocRead Site Collection Administrators** have access to the DocRead Site Collection reports.

**DocRead Site Administrators** will be allowed to view reports at site level and process site readerships.

**DocRead Publishers** are allowed to assign readership groups to documents / items needing to be published via DocRead.

DocRead Site Collection Administrators Please select the group of users that will have permissions to see DocRead Reports scoped at the site collection level.	Site group: DocRead Admins X Policy Creation Team Owners X
DocRead Site Administrators Please select the group of users that will have permissions to see DocRead tasks for all site users.	Site group: DocRead Admins 🗙
DocRead Publishers Please select the group of users that will have permission to assign DocRead audiences to documents.	Site group:          DocRead Publishers X       Approvers X

**Note:** It is important to consider how many publishers you wish to allow. If you only allow a few users to have this permission, anyone wishing to publish a document via DocRead will have to approach them for help. On the other hand, if you allow all users to assign readership groups, you may end up with thousands of unnecessary documents being distributed throughout your organisation, which will add extra processing load onto SharePoint. We recommend that fewer is generally better.

7. Force View Document specifies whether the user must open and download a document before they are able to read and confirm it. This option is set globally for the SharePoint Farm during the installation and initial set up process and may be turned off at individual site level on the Site Settings page. We recommend leaving this checked so that you can ensure users have at least opened the document.

Force View Document
Select this option if you want to force users to view a document before they can confirm that they have read it.

8. Default to confirmation tab makes the 'Confirmation' tab of the DocRead Task Details panel the default tab when the panel is displayed to users.

Default	to	Confirmation	lab

Clos	se		

9. The 'Enable Global Audiences' section determines if DocRead Publishers are allowed to use SharePoint Global Audiences to assign DocRead tasks. This option is not available on SharePoint Foundation or on DocRead Team or Standard editions.

Determines if SharePoint global audiences can be used to assign DocRead tasks. Enable Global Audiences

**Note:** If you enable Global Audiences on a specific site DocRead Publishers will not be able to directly assign DocRead tasks to AD groups or individual users on that site. Indirect use will still be allowed (Publishers will still be able to nest AD groups or users into SharePoint groups and then use those SharePoint groups as DocRead Audiences).

10. Click 'OK' to save your selections.

Enable Global Audiences

## 4 User Management

The User Management option in the Collaboris Settings Configuration section provides details of all of the users who have been assigned a DocRead licence. Licences are assigned to a user when the first DocRead task is assigned to them, so over time you may find that some of these users leave your organisation and you may wish to free up their DocRead licence for another user. You can also amend user's names (if they get married for example) and also delete users from within this section.

S	Colla	boris Settings
Central Administration	5	Configuration
Application Management		Global settings   Licensing   Configure messages   Configure terms and conditions   User Management
System Settings	MA	Monitoring
Monitoring		Event logs
Backup and Restore		Databases
Security		Database settings
Upgrade and Migration		Installation and Upgrades
General Application		Upgrade   Uninstall

The User Management section will initially list details for each user that has a DocRead licence currently assigned to them.

S >	User Ma	nagement			
Central Administration	Total users: 16				
Application Management	Preferred name:	User name:	Search		
System Settings			Search		
Monitoring	Users				
Backup and Restore	Preferred Name	User name	Email	Manager	Manager Email
Security	Administrator	sp2013\administrator			
Upgrade and Migration	Demo Admin	sp2013\demo.admin	Demo.Admin@unitede	xports.com

Apps	Frank	sp2013\frank.farrington	Frank.Farrington@unite	edexports.local	
Collaboris Settings	Farrington				
Configuration Wizards	Freddy Farrington	sp2013\freddy.farrington	Freddy.Farrington@uni	tedexports.local	sp2013\frank.farrington

Clicking on a specific user name will display a context menu that will allow you to perform the following actions over the selected user account:

1. **User Audiences** - This option displays a list of all of the user groups and audiences that person is a member of.

User Audiences			×
Name	Audience Type	Login Name	
All Staff	SPGroup	All Staff	
Engineering Staff	SPGroup	Engineering Staff	
First Aiders	SPGroup	First Aiders	
Policies Portal Owners	SPGroup	Policies Portal Owners	
Test Group A	SPGroup	Test Group A	

 Change Name – Allows you to amend the users name or preferred name which can be helpful if they have recently got married or changed their name for any reason. Simply input the new values and click 'Ok'.

Change Usernam	ie	×
Current Values Preferred Name: User Name:	Hugo clbdev\hugo	
New Values Preferred Name: User Name:	Hugo clbdev\hugo	
	Ok Cancel	

# 3. **Delete Account** – Deletes the user account and all related tasks (reading receipts will not be deleted). This will release the user license associated with the user.

**Note:** You need to ensure that the user account has been removed from all DocRead audiences (SharePoint groups, AD groups and\or SharePoint Audiences) assigned to documents otherwise DocRead will re-add the user account and continue to assign tasks to the user. In order to check what DocRead audiences the user is assigned to please use the 'User Audiences' option described above.

### 5 View and Manage the Event Logs

The DocRead Event Log page displays a log of the various events that occur during processing. The Event Log section at the bottom of the page can be filtered to show more details about the events.

Please check this log regularly to ensure no errors are encountered.

## DocRead Event Logs

### 6 Upgrade DocRead to a new Version

Upgrading DocRead may require files on all front ends to be updated and/or changes in SQL to be applied.

**Note:** Please test every upgrade on a copy of live (test) farm before running on live. If you need a Non Production Licence to do this, then one can be arranged for the duration of the upgrade cycle free of charge.

**Note:** If you are on DocRead version 2.2 or below you need to first upgrade to DocRead version 2.7, before upgrading to version 3.5.

#### 6.1 Pre-upgrade check list.

Before starting the upgrade please ensure you have carried out the following activities.

- ✓ Backed up the SharePoint configuration database.
- ✓ Backed up the SharePoint content databases (for all sites where DocRead is enabled).
- ✓ Backed up the DocRead database.
- ✓ Tested the upgrade on a test farm.

#### 6.2 How to back-up the databases

To perform a backup of the content and config databases in SharePoint 2013 or 2016, please refer to this link: <u>http://technet.microsoft.com/en-us/library/ee428327.aspx</u>

To perform a backup of the DocRead database please refer to this article:

http://msdn.microsoft.com/en-us/library/ms187510.aspx

#### 6.3 Steps to upgrade DocRead

**Note:** Please be aware that following these instructions will cause your web applications worker process to restart. If you are performing the upgrade on a production server we recommend that you follow these steps out-of-hours.

1. Uninstall DocRead via 'Control Panel > Programs > Uninstall a program'. This will not remove DocRead from your SharePoint Farm so you will not lose any data. This simply removes installation files (such as WSPs) from the local file system.

Uninstall or change a program					
To uninstall a program, select it from the list and then click Uninstall, Change, or Repair.					
Organize 🕶 Uninstall Change Repair					
Name 🔶	Publisher	Installed On	Size	Version	
E Active Directory Rights Management Services Client 2.1	Microsoft Corporation	22/07/2013	40.3 MB	1.0.959.0	
Adobe Reader XI (11.0.09)	Adobe Systems Incorporated	09/10/2014	184 MB	11.0.09	
AppFabric 1.1 for Windows Server	Microsoft Corporation	21/12/2012		1.1.2106.32	
4 DocRead	Collaboris	13/01/2015	13.2 MB	1.5.0	
💿 Google Chrome	Google Inc.	23/12/2012		39.0.2171.95	

- 2. Download the latest version of DocRead from the link supplied in the upgrade email.
- 3. Select 'Run As Administrator' for the DocRead setup.exe file and allow the installer wizard to run. When you get to the 'Install Options' screen do not select 'Deploy Solution To SharePoint'. Please note, as the solution packages are already installed within your SharePoint farm, the 'deploy' option is meaningless. (Full installation instructions are available in section 2.4 if you wish to refer back to them.)
- 4. Wait for the installer to finish updating all the files deployed by the previous version (this can take several minutes depending on the size of your farm).
- 5. Restart your SharePoint timer job by going to the windows 'Start Menu > Administrative Tools > Services', right click on 'SharePoint Timer Service' and select 'Restart'.
- 6. Perform an IISRESET on all servers in your Farm to ensure that the latest components are loading into memory.

Note: It is vitally important that you restart your SharePoint Timer Job and perform an **IISReset on** <u>all Web Front Ends and Application servers</u> in your farm. Failure to do this step may cause files to be locked and the upgrade to fail.

After these steps your solution packages should now be upgraded to the latest version of DocRead.

You may still need to upgrade your Database and/or SharePoint components. To upgrade these - follow these steps:

- 7. Navigate to SharePoint Central Administration.
- 8. Click on the 'Collaboris Settings' menu heading to go to the full Collaboris menu.

9. From the 'Installation and Upgrades menu, select 'Upgrade'.

- 10. If you haven't already backup your existing DocRead database and check the box to confirm this has been completed. If the upgrade fails you will need this to restore.
- 11. If the 'Upgrade' button in the 'Upgrade the DocRead database' section is enabled, click it. Wait until it completes (this could take a while).

- 13. If you have upgraded from version 1.x or 2.x of the software ,please now go to the Collaboris licensing screen (in SharePoint Central Administration) and input your new licence for DocRead version 3 (licences for version 1 or 2 will not work).
- 14. Perform an IISRESET and restart your SharePoint Timer Job on all Web Front Ends and Application Servers.

### 6.4 Upgrading the Collaboris Notification Scheduler

**Note:** Any modifications made to **'Jobs.config**', **'Log4net.config**' or the **'CollaborisSchedulingAgent.exe.config**' files need to be backed up and re-applied.

- 1. Uninstall the Collaboris Notification Scheduler via 'Control Panel > Programs > Uninstall a program'. This will not affect any notification data already on the DocRead database.
- 2. Select 'Run As Administrator' for the Notification Scheduler setup.exe file (provided in the upgrade email notice) and allow the installer wizard to run.
- 3. Configure the Notification Scheduler as before.
- 4. Please ensure that the Scheduler database name and the DocRead database name that you use when configuring the new Scheduler are the same as the values already configured in the DocRead database settings page in Central Administration. This process is described more fully in section 2.6.1.

### 7 Uninstall

#### 7.1 To Uninstall DocRead from your Server Farm

When DocRead is uninstalled from SharePoint this will completely remove all reading tasks and any data relating to them. If you think you may need this data again in the future, please backup the DocRead database first.

The uninstall process will not remove any DocRead web parts from pages in your sites. You must remove them manually or via a Powershell script, prior to running this. Failure to do this will result in errors on those pages.

- 1. On the server where you installed DocRead go to 'Control Panel > Programs > Uninstall a Program'
- 2. Highlight DocRead and select 'Uninstall'.
- 3. Follow the steps on the Uninstall Wizard. This will not remove or retract the solution packages from SharePoint, it merely removes the files on the application server. To completely remove DocRead follow the next steps.
- 4. Connect to SharePoint Central Administration home page.
- 5. Navigate to 'Collaboris Settings > Uninstall (under the Installation and Upgrades section)'.

Uninstall Collaboris Applications	
Uninstall Collaboris Applications Creates a timer job that removes the DocRead functionality from all the sites where in this farm. This will delete all DocRead related data. This operation cannot be undone.	<ul> <li>✓ I understand that clicking uninstall will delete all the data stored with the Collaboris Applications database. This may include DocRead Reading Tasks and DocSurvey statistics.</li> <li>Uninstall</li> </ul>

6. Read the warning and select the box if you wish to proceed with the Uninstall.

**Warning:** Uninstalling DocRead will delete all DocRead related data stored in SharePoint and in the Collaboris Applications Database. This action cannot be undone.

- 7. Press the 'Uninstall' button. This will create a timer job that will remove DocRead and any associated modules (e.g. DocSurvey) from your SharePoint farm.
- 8. Wait 15 minutes to give enough time for the Uninstall timer job to finish (this time will depend on the number of SharePoint Sites where DocRead was installed).
- 9. In Central Admin select 'System Settings' on the left menu.
- 10. Select 'Manage Farm Solutions'.
- 11. Select the 'Collaboris.readership.solution2013.wsp' solution (this will state 2013 even if you are using SharePoint 2016).
- 12. Select 'Retract solution'.
- 13. Select 'All Content Web Applications'.

**Note:** You might need to repeat step 11 and 12 but this time selecting the central admin web application instead of 'All Content Web Applications' to ensure that DocRead is removed from the central administration web site

- 14. Go back to the solution management page (same as the one in step 9).
- 15. Select Remove solution.
- 16. Repeat steps 9 to 15 to remove the 'collaboris.sharepoint.quiz.solution2013.wsp' solution package if you have installed the DocSurvey module on your farm (this will state 2013 even if you are using SharePoint 2016).
- 17. Repeat steps 9 to 15 to remove the 'collaboris.readership.charting.solution2013.wsp' solution package if you have installed the Charting Web Parts.

#### 7.2 To Uninstall the Collaboris Notification Scheduler

- 1. On the server where you installed DocRead from go to 'Control Panel > Programs > Uninstall a Program'.
- 2. Highlight Collaboris Notification Scheduler and select 'Uninstall'.
- 3. Follow the steps on the Uninstall Wizard.

## 8 Support

We hope you have found this guide easy to follow and have successfully installed DocRead.

If you require any further information please contact our support team by raising a ticket on our helpdesk system at <a href="https://www.collaboris.com/support/">https://www.collaboris.com/support/</a>.
